

SIPslice IP Converter

Simplifying Serial to TCP/IP Communications

Overview

The Synapsys SIPslice IP Converter has been developed to provide a simple and efficient way of converting ModBus, M-Bus or single pulse Serial communications messages to ModBus or M-Bus TCP/IP communications messages.

The SIPslice IP converter utilises built in web pages to configure the communication parameters necessary to convert the serial communications to the TCP/IP network.

When configured the SIPslice IP converter allows information from a network of ModBus or M-Bus Serial slave addresses to be transferred to ModBus or M-Bus TCP/IP Master(s). The digital/pulse acquisition input will appear as a unique address on the fieldbus network.

The hardware has also been designed to have a small footprint and utilises PoE making them ideal for inclusion within panels and other locations where space is at a premium.

Key features:

- Low cost solution ideal for reducing onsite wiring, and utilising the existing IP infrastructure
- LED's for power, BUS activity, Health and Comms
- Power over Ethernet (PoE)
- 1 x RS485 or RS232 ModBus protocol
- 1 x M-Bus protocol (up to 60 units loads)
- 1 x Digital Input / Pulse counter
- DIN Rail mounting
- Small footprint

SIPslice IP Converter product range

Part No.	Description
SYN/IP/CONV	SIPslice IP Converter provides a simple way of converting Serial communications messages to TCP/IP communications messages.
